Safety Messages

Your safety and the safety of others are very important.

We have provided many important safety messages in this manual and on your appliance. Always read and follow all safety messages.

⚠️ This is the safety alert symbol.

This symbol alerts you to potential hazards that can kill or injure you and others. All safety messages will follow the safety alert symbol and either the word WARNING or CAUTION.

These words mean:

⚠️ ## WARNING

You may be killed or seriously injured if you do not follow instructions.

⚠️ ## CAUTION

You may be injured or cause damage to the product if you do not follow instructions.

All safety messages will tell you what the potential hazard is, tell you how to reduce the chance of injury, and tell you what may happen if the instructions are not followed.

WARNING

⚠️ WARNING

• To reduce the risk of explosion, fire, death, electric shock, injury or scalding to persons when using this product, follow basic precautions, including the following:

Installation

• Never allow anyone to climb, sit, stand or hang on the oven door. Injury might result from contact with hot food or the oven itself.

• Do not line the oven walls, racks, bottom, or any other part of the oven with aluminum foil or any other material. Doing so will disrupt heat distribution, produce poor baking results and cause permanent damage to the oven interior. (Aluminum foil will melt on the interior surface of the oven.)

• Do not use aluminum foil or any other material to line the oven bottom. Improper installation of oven liners may result in a risk of electric shock or fire.

• Make sure your appliance is properly installed and grounded by a qualified installer, according to the installation instructions. Any adjustment and service should be performed only by qualified installers or service technicians.

• Be certain that all packing materials are removed from the appliance before operating. Keep plastic, clothes, paper, and other flammable materials away from parts of the appliance that may become hot.

• The electrical power must be shut off while the electrical connections are being made.

• Improper connection of aluminum house wiring to copper leads can result in an electrical hazard or fire. Use only connectors designed for joining copper to aluminum and follow the manufacturer's recommended procedure closely.

• Important – Save for the local electrical inspector's use

Operation

- DO NOT TOUCH HEATING ELEMENTS OR INTERIOR SURFACES OF OVEN. Heating elements may be hot even though they are dark in color. Interior surfaces of an oven become hot enough to cause burns. During and after use, do not touch or let clothing or other flammable materials contact heating elements or interior surfaces of oven until they have had sufficient time to cool. Other surfaces, such as oven vent openings and surfaces near these openings, oven doors, and windows of oven doors, also get hot and may cause burns if not allowed to cool.

- Use care when opening door. The hot air and steam that escape can cause burns to hands, face and eyes. Let hot air or steam escape from the oven before removing or replacing food in the oven.

- Do not use plastic to cover food. Use foil or oven-safe lids only.

- Never attempt to dry a pet in the oven.

- Never use your appliance for warming or heating the room.

- Always use pot holders or oven mitts when removing food from an oven or cooktop. Cookware will be hot. Use only dry pot holders. Moist or damp pot holders on hot surfaces may result in burns from steam. Do not let the pot holder touch hot heating elements. Do not use a towel or other bulky cloth to remove food.

- Do not heat unopened food containers. Pressure in the containers may cause them to burst which may result in injury.

- Do not allow aluminum foil or the temperature probe to contact heating elements.

- Do not touch the oven racks while they are hot.

- Only arrange oven racks when the oven is cool. If a rack must be moved while the oven is hot, do not let the pot holder contact the hot heating element in the oven.

- Pull the oven rack to the stop-lock position when loading and unloading food from the oven. This helps prevent burns caused by touching hot surfaces of the door and oven walls.

- Do not use the oven if a heating element develops a glowing spot during use or shows other signs of damage. A glowing spot indicates the heating element may fail and present a potential burn, fire, or shock hazard. Turn the oven off immediately and have the heating element replaced by a qualified service technician.

- Do not leave children alone or unsupervised near the appliance when it is in use or is still hot. Children should never be allowed to sit or stand on any part of the appliance as they could be injured or burned.

- DO NOT block the oven vent during operation. This can damage the electric parts of the oven. Air must be able to move freely. The bottom vent trim should be properly assembled on the front bottom of oven before installing the oven door.

- Do not put large, heavy items such as whole turkeys on the open oven door.

- Take care when the door is open to avoid injury.

- If the door or door seals are damaged, the oven must not be operated until it has been repaired by a competent person.

- Do not allow children to crawl into the oven.

- Do not put your hand under the controller or between the door and bottom vent trim during operation. The outside of the oven can become very hot to the touch.

Maintenance

- Let hot cookware and utensils cool in a safe place, out of reach of small children.

- If the door glass, surface, or oven heating unit of the appliance are damaged, discontinue use of the appliance and call for service.

- Always disconnect power from the appliance before servicing.

- Before replacing the oven light, switch off the electrical power to the oven at the main fuse or circuit breaker panel.

- Never pour cold water over a hot oven for cleaning purposes.

- Oversized food or oversized metal cookware should not be inserted in a microwave/toaster oven as they may create a fire or risk of electric shock.
- Do not clean with metal scouring pads. Pieces can burn off the pad and touch electrical parts causing a risk of electric shock.
- Do not store any materials, other than manufacturer's recommended accessories, in this oven when not in use.
- Do not cover racks or any other part of the oven with metal foil. This will cause overheating of the oven.
- If your oven is dropped or damaged, have it thoroughly checked by a qualified service technician before using it.

Risk of Fire and Flammable Materials

- Do not store or use flammable material in or near the oven. Flammable materials include paper, plastic, pot holders, linens, wall coverings, curtains, and gasoline or other flammable vapors and liquids such as grease or cooking oil. These materials can be ignited when the oven is in use.
- Use extreme caution when moving or disposing of hot grease.
- Wear proper apparel. Do not wear loose-fitting or hanging garments, which may ignite if they contact hot surfaces, and cause severe burns.
- Do not use the oven for drying clothes. Only use the oven for its intended purpose.
- If cabinet storage is provided directly above the oven, use it to store items that are not frequently used and can be safely stored in an area subjected to heat. Temperatures may be unsafe for volatile items such as flammable liquids, cleaners or aerosol sprays.
- Do not use water on grease fires. Should an oven fire occur, leave the oven door closed and turn the oven off. If the fire continues, throw baking soda on the fire or use a fire extinguisher. Do not put water or flour on the fire. Flour may be explosive and water can spread a grease fire and cause personal injury.

CAUTION

⚠ CAUTION

- To reduce the risk of minor injury to persons, malfunction, or damage to the product or property when using this product, follow basic precautions, including the following:

Operation

- Always heat fat slowly, and watch as it heats.
- If frying combinations of oils and fats, stir them together before heating.
- Use a deep fat thermometer, if possible, to prevent overheating fat beyond the smoking point.
- Use the least possible amount of fat for effective shallow or deep-fat frying. Filling the pan with too much fat can cause spillovers when food is added.
- Accessible parts may become hot when the grill is in use.
- Do not place food or cookware on the bottom of the oven cavity. Doing so will cause permanent damage to the oven bottom finish.
- When using cooking or roasting bags in the oven, follow the manufacturer's directions.
- To protect against food-borne illnesses, cook meat and poultry thoroughly. The USDA has indicated the following as safe minimum internal temperatures for consumption:
  - Ground beef: 160 °F (71 ℃)
  - Poultry: 165 °F (74 ℃)
  - Beef, veal, pork, or lamb: 145 °F (63 ℃)
  - Fish/seafood: 145 °F (63 ℃)

- Do not use this oven for commercial purposes. It is made for household use only.
- The door or the outer surface may get hot when the appliance is operating.
- Do not use this oven for purposes other than cooking.
- Use caution if opening the door when the oven is operating. Hot surfaces can cause serious burns.
- Place oven racks in the desired location before turning on the oven to avoid burns.

Maintenance

- Do not repair or replace any part of the appliance unless specifically recommended in the manual. All other servicing should be performed by a qualified technician.
- Do not use harsh, etching, abrasive cleaners or sharp metal scrapers to clean the oven door glass since they can scratch the surface. Scratches may cause the glass to shatter.
- Make sure oven lights are cool before cleaning.
- Do not clean the door gasket. The door gasket is essential for a good seal. Care should be taken not to rub, damage, or move the gasket.
- Do not rinse trays and racks by placing them in water just after cooking. This may cause breakage or damage.
- The oven should be cleaned regularly and any food deposits should be removed. Failure to maintain the oven in a clean condition could lead to deterioration of the surface that could shorten the life of the appliance and possibly result in a hazardous situation.
- Do not clean the oven door gasket. The oven door gasket is made of a woven material that is essential for a good seal. Care should be taken not to rub, damage, or remove this gasket.
- Do not use oven cleaners. Commercial oven cleaner or oven liner protective coating of any kind should not be used in or around any part of the oven.
- Do not store items of interest to children on the back guard or in cabinets above a cooking appliance. Children climbing on the oven to reach items could be seriously injured.

Operating the Oven

Before Using the Oven

NOTE

• Because the oven temperature cycles, an oven thermometer placed in the oven cavity may not show the same temperature that is set on the oven.

• If the door is left open for longer than 30 seconds during baking, the heater turns off. The heater turns back on automatically once the door is closed.

- Avoid opening the oven door more than necessary during use. This helps the oven maintain temperature, prevents unnecessary heat loss, and saves on energy use.

Oven Vent

Areas near the vent may become hot during operation and may cause burns. Avoid placing plastics near the vent as heat may distort or melt the plastic.

It is normal for steam to be visible when cooking foods with high moisture content.

⚠ WARNING

- Do not block the vent opening at the bottom of the oven.

Assembling Rack Guides

Assemble the rack guides on both sides of the oven cavity before operating the oven for the first time. This keeps the oven racks in position.

⚠ WARNING

- Remove the protective film from all telescopic runners.
❶	Rear Opening
❷	Front Opening
❸	Rear Rack Guide Hook (curved)
❹	Front Rack Guide Hook (straight)

1 Place the rack inside the oven cavity so that the curved end of the rack is at the back of the oven.

2 Insert the rear rack guide hook ❸ into the oven cavity opening ❶.

3 Insert the front rack guide hook ❹ into the oven cavity opening ❷ and press down to secure it in place.

4 Repeat steps 1-3 to install the second rack guide on the other side of the oven cavity.

Using the Telescopic Runners

Installing the Telescopic Runners

Install the telescopic runners before operating the oven for the first time.

⚠ WARNING

- Allow the oven to cool before installing or removing the telescopic runners to prevent burns.

NOTE

- Place a soft cloth on the floor to avoid damaging the parts.

1 Hold the telescopic runner with the longer tab on the clips facing down and the pins facing up.
2 Align the telescopic runner horizontally with the rack guide.
❶	Rack Guide
❷	Telescopic Runner

3 Hook both the telescopic runner clips onto the upper rail at the desired rack position.

4 Pull the telescopic runner forward until the lower parts of the clips snaps onto the lower rail on the rack guide.

5 Repeat steps 1-4 for the other telescopic runner to install it in the same position on the other side.

Removing the Telescopic Runners

⚠ WARNING
• Allow the oven to cool before installing or removing the telescopic runners to prevent burns.

NOTE
• Place a soft cloth on the floor to avoid damaging the parts.

1 Pull the telescopic runner clips away from the rack guide.

❶ Telescopic Runner Clip

❷ Telescopic Runner

❸ Rack Guide

2 Lift up the whole telescopic runner and pull forward to detach it from the rack guide.

Using the Telescopic Runners
The telescopic runners slide in and out on a frame. This keeps heavy cookware level and prevents it from sliding forward when the telescopic runner is completely extended.
Using Standard Oven Racks

The racks have a turned-up back edge that prevents them from being pulled out of the oven cavity.

⚠ CAUTION

- Reposition oven racks before turning the oven on to prevent burns.
- Do not cover the racks with aluminum foil, or any other material, or place anything on the bottom of the oven. Doing so will result in poor baking and may damage the oven bottom.
- Only arrange oven racks when the oven is cool.
- Do not place objects heavier than 33 lb (15 kg) on the racks. Do not place heavy objects on the corners of the racks. Doing so can damage the racks.

Removing Racks

1 Pull the rack straight out until it stops.

2 Lift up the front of the rack and pull it out.

Replacing Racks

1 Place the end of the rack on the support.

2 Tilt the front end up and push the rack in.

Instaview

Knock twice on the center of the glass panel to reveal the contents of the oven without opening the door.
⚠ CAUTION

- Do not hit the glass door panel with excessive force. Do not allow hard objects like cookware or glass bottles to hit the glass door panel. The glass could break, resulting in a risk of personal injury.

NOTE

- Knocking twice on the glass panel turns the interior light on or off.
- The InstaView function is disabled when the oven door is opened and for one second after closing the door.
- The InstaView function is disabled during Control Lock, Sabbath Mode and initial power input.
- Tapping the edges of the glass panel may not activate the InstaView function.
- The taps on the glass panel must be hard enough to be audible.
- Loud noises near the oven may activate the InstaView function.
Setting InstaView

1 Press **Settings** at the right bottom of the **Main Menu** screen, then press InstaView.

2 "**When turned ON, you can turn the oven lights on or off by knocking twice on the center of the door glass.**" appears in the display when the **InstaView** feature is activated. Press **OK**.

Convection Bake and Roast Mode

The convection system uses a fan to circulate the heat evenly within the oven. Improved heat distribution allows for even cooking and excellent results while cooking with single or multiple racks.

The Convection Roast feature is designed to give optimum roasting performance. Convection Roast combines cooking with the convection fan to roast meats and poultry. The heated air circulates around the food from all sides, sealing in juices and flavors. Foods are crispy brown on the outside while staying moist on the inside. Convection roasting is especially good for large tender cuts of meat, uncovered.

The oven can be programmed to bake at any temperature from 170 ℉ (76 ℃) to 500 ℉ (260 ℃). The default temperature is 350 ℉ (175 ℃).
Setting the Convection Function

1 Press **Manual Cook** in the **Main Menu** screen.

2 Select **Convection Bake** or **Convection Roast** in the cooking mode screen.

3 Press **Temp.** to set the desired cooking temperature. Press ∧ or ∨ to increase or decrease the temperature and then press ← to save the settings.
You can also use the number pad icon to set the cooking temperature directly and then press **OK**.

Tips for Convection Baking

- Use Convection Bake for faster and more even multiple-rack cooking of pastries, cookies, muffins, biscuits, and breads of all kinds.
- Bake cookies and biscuits on pans with no sides or very low sides to allow heated air to circulate around the food. Food baked on pans with a dark finish will cook faster.
- When using Convection Bake with a single rack, place the rack in position ③. If cooking on multiple racks, place the oven racks in positions ② and ④.
- Multiple oven rack cooking may slightly increase cook times for some foods.

Tips for Convection Roasting

- For better roasting results, baste joints and poultry with their own juices a number of times during the roasting process.
- Use heat resistant dishes when roasting (follow manufacturer's instructions).
- Stainless steel roasting pans are only of limited use, as they reflect the heat to a very large extent.
- When using dishes with plastic handles, ensure that the handles are heat resistant (follow manufacturer's instructions).
- Large items for roasting or a number of items can be placed directly on the oven rack above the deep pan (or baking tray) (e.g. turkey, goose, 3 or 4 chickens, 3 or 4 knuckles of veal).
- Lean meat should be roasted in a roasting tray with a lid (e.g. veal, braised beef, deep frozen meat). This keeps the juices in the meat.
- For cooking crispy crusts or bacon, use a casserole dish without the lid (e.g. pork, minced meat, lamb, mutton, duck, knuckle of veal, chicken, poultry meat, roast beef, fillet of beef, game birds).

- Pour enough water into the deep pan (or baking tray) to prevent smoking when you use roasting mode.
- Clean the oven as soon as possible after use if you are roasting in an open-topped tin or dish. It is easier to remove fat splashes when the oven is still warm. Wear heat-proof gloves to avoid burns.

⚠ CAUTION

- Do not cover the roasting rack with aluminum foil.
- Position food (fat side up) on the roasting rack.
- Pressing the **POWER** button during cooking clears all settings.

Bake Mode

Bake is used to prepare foods such as pastries, breads and casseroles.

Baking Tins

- When baking in **Bake** modes, use baking tins with a dark metal or coated surface.
- When baking with **Convection Bake**, you can also use baking tins with a bright metal surface.
- Always place cake tins in the middle of the tray or oven rack.
- When baking with **Bake**, you can place two baking tins side by side in the oven for a baking time that is only slightly longer.

NOTE

- If no cook time is set, the oven turns off automatically after 12 hours.

Recommended Baking Guide

Rack and Pan Placement
Baking results will be better if baking pans are centered in the oven as much as possible.

Multiple-rack cooking saves time and energy. Whenever possible, cook foods requiring the same cooking temperature together in one oven.

Baking Rack Guide

Type of Food	Rack Position
Angel food cake, frozen pies	②
Bundt or pound cakes	②
Biscuits, muffins, brownies, cookies, cupcakes, layer cakes, pies	③
Casseroles	③
Type of Food	Rack Position
Turkey, roasts, or ham	①
Frozen pizza	③

NOTE
- When baking cakes and cookies on multiple racks, use the Convection Bake mode and place racks in positions ② and ④.
- Always count rack position from the bottom up.

Broil Mode

Setting the Oven to Broil
Broiling uses an intense, radiant heat to cook food. Both the inner and outer broil elements heat during full broiling. Only the inner broil element heats during center broiling. The element(s) cycle on and off at intervals to maintain the oven temperature. The meat probe cannot be used with this mode.

Keep the oven door closed while broiling. Let the oven preheat for approximately 5 minutes before cooking food.

⚠ CAUTION

- Do not cover the oven rack with aluminum foil. Doing so will cause a fire.
- Should an oven fire occur, leave the oven door closed and turn the oven off. If the fire continues, throw baking soda on the fire or use a fire extinguisher.
- DO NOT put water or flour on the fire. Flour may be explosive and water can cause a grease fire to spread and cause personal injury.
- When using your broiler, the temperature inside the oven will be extremely high. Take care to avoid possible burns by:
  - Keeping the door closed when broiling
  - Always wearing oven mitts when inserting or removing food items

NOTE

- This appliance is designed for closed-door broiling. Close the door to set the Broil function. If the door is open, the Broil function cannot be set and **Close the door to start cooking** appears on the display. Close the door and reset the Broil function. If the door is opened during broiling, the broil burner turns off after five seconds. The broiler turns back on automatically once the door is closed.

1 Press **Manual Cook** in the **Main Menu** screen.

2 Press **Broil**.

3 Select the desired temperature: **Low**, **Medium**, or **High**.

4 If desired, press **Time** and press **Cook Time** or **Cooking starts at** to set the cook time or cooking start time. Press ⋀ or ⋁ to increase or decrease the time and then press ← to save the settings.
You can also use the number pad icon to set the cooking time directly and then press **OK**.

5 Press the **START/STOP** button on the control panel.

6 Let the oven preheat for approximately 5 minutes before cooking the food.

7 If the cook time is set, the remaining time appears in the display. If a cooking start time is set, the start time appears in the display.

8 Press the **START/STOP** button on the control panel to cancel at any time or when cooking is complete.

NOTE

- If the cook time is not set, the oven automatically turns off after 3 hours.
- The heating elements and fan turn off if the door is opened. They turn on again after the door is closed.

Changing the Broil Settings

1 Press **Edit** in the display to bring up the Cook Settings screen.

2 Adjust the settings using the number pad or scroll function.

3 Press the **START/STOP** button on the control panel.

To Stop Cooking

Press the **START/STOP** button on the control panel and then press **Stop** in the display.

Tips for Reducing Smoke

Due to the intense heat associated with broiling, it is normal to experience smoke during the cooking process. This smoke is a natural byproduct of searing and should not cause you to worry. If you are experiencing more smoke than you are comfortable with, use the following tips to reduce the amount of smoke in your oven.

- Always use a broiler pan. Do not use saute pans or regular baking sheets for safety reasons.
- The broiler pan should always be thoroughly cleaned and at room temperature at the beginning of cooking.
- Always run your cooktop ventilation system or vent hood during broiling.

- Keep the interior of your oven as clean as possible. Leftover debris from prior meals can burn or catch fire.

- Avoid fatty marinades and sugary glazes. Both of these will increase the amount of smoke you experience. If you would like to use a glaze, apply it at the very end of cooking.

- If you are experiencing significant smoke with any food item, consider:

  - Lowering the broiler to the **Low** setting.

  - Lowering the rack position to cook the food farther away from the broiler.

  - Using the **High** broil setting to achieve the level of searing you desire, and then either switching to the **Low** broil setting, or switching to the Medium broil setting.

- As a rule, fattier cuts of meat and fish will produce more smoke than leaner items.

- Adhere to the guidelines in the **Recommended Broiling Guide** section whenever possible.

Recommended Broiling Guide

The size, weight, thickness, starting temperature, and your preference of doneness will affect broiling times.

- This guide is only for reference. Adjust cook time according to your preference.

NOTE

- The USDA advises that consuming raw or undercooked fish, meat, or poultry can increase your risk of food-borne illness.
- The USDA has indicated the following as safe minimum internal temperatures for consumption:
  - Ground beef: 160 ℉ (71.1 ℃)
  - Poultry: 165 ℉ (73.9 ℃)
  - Beef, veal, pork, or lamb: 145 ℉ (62.8 ℃)
  - Fish / Seafood: 145 ℉ (62.8 ℃)

Tips for Broiling

Beef

- Steaks and chops should always be allowed to rest for five minutes before being cut into and eaten. This allows the heat to distribute evenly

through the food and creates a more tender and juicy result.

• Pieces of meat that are thicker than two inches should be removed from the refrigerator 30 minutes prior to cooking. This will help them cook more quickly and evenly, and will produce less smoke when broiling. Cooking times will likely be shorter than the times indicated in the Broiling Chart.

• For bone-in steaks or chops that have been frenched (all meat removed from around the bone), wrap the exposed sections of bone in foil to reduce burning.

Seafood

• When broiling skin-on fish, always use the Lo broil setting and always broil the skin side last.

• Seafood is best consumed immediately after cooking. Allowing seafood to rest after cooking can cause the food to dry out.

• It is a good idea to rub a thin coating of oil on the surface of the broiling pan before cooking to reduce sticking, especially with fish and seafood. You can also use a light coating of non-stick pan spray.

Vegetables

Toss your vegetables lightly in oil before cooking to improve browning.

Frozen Meal

The Frozen Meal function is specially designed for cooking frozen prepared meals. It heats from both the top and bottom to brown food more evenly.

This system is designed to give the optimum cooking performance by automatically selecting a combination of the broil and bake heating systems. No preheating is required when using the Frozen Meal mode. For best results with frozen pizza, cook food on a single rack placed in position 4 at 400 °F.

Setting the Frozen Meal Function

1 Press **Manual Cook** in the **Main Menu** Screen.

2 Select **Frozen Meal** in the cooking mode screen.

3 Press **Temp.** to set the desired cooking temperature. Press ∧ or ∨ to increase or decrease the temperature and then press ⟵ to save the settings.
You can also use the number pad icon to set the cooking temperature directly and then press **OK**.

4 If desired, press **Time** and press **Cook Time** or **Cooking starts at** to set the cook time or cooking start time. Press ∧ or ∨ to increase or decrease the time and then press ⟵ to save the settings.

NOTE
• To avoid lowering the oven temperature and lengthening proofing time, do not open the oven door unnecessarily. Check bread products early to avoid over proofing.
• Do not use the Proofing mode for warming food or keeping food hot. The proofing oven temperature is not hot enough to keep foods at safe temperatures. Use the Warm feature to keep food warm. Proofing does not operate when the oven is above 150 ℉. **Oven is too hot.** shows in the display.
• The proof feature automatically provides the optimum temperature for the proofing process, and therefore does not have a temperature adjustment.
• For best results, cover the dough with a cloth or with plastic wrap. (The plastic may need to be anchored underneath the container so the oven fan does not blow it off.)
• If using Proof after cooking, wait for the oven to cool first.
• The Proof mode can only be set as a single stage, not as part of multi-stage cooking.

Air Fry

This feature automatically increases the entered temperature by 45 ℉ for optimal performance when using Air Fry.

The Air Fry mode can be programmed to cook at any temperature from 300 °F (148 °C) to 500 °F (260 °C). The default temperature is 400 °F (205 °C).

5 Press the **START/STOP** button on the control panel.

6 If the cook time is set, the remaining time appears in the display. If a cooking start time is set, the start time appears in the display.

7 A chime sounds at the end of the set cook time and a notification appears in the display. Open the oven door and remove the food.

To Stop Cooking

Press the **START/STOP** button on the control panel and then press **Stop** in the display.

NOTE

- No preheating is required when using the Air Fry mode.
- If cooking multiple batches, the later batches may take less time to cook.

- Wet batters and coatings will not crisp or set when using the Air Fry mode.

Tips for Air Fry

- For best results, cook food on a single rack placed in the positions suggested in the chart in this manual.
- Spread the food out evenly in a single layer.
- Use either the air fry tray or a dark baking tray with no sides or short sides that does not cover the entire rack. This allows for better air circulation.
- If desired, spray the baking tray or air fry tray with a pan spray. Use an oil that can be heated to a high temperature before smoking, such as avocado, grapeseed, peanut or sunflower oil.
- Place a foil-lined baking tray on a rack in position ① to catch the oil falling from the food. For high-fat foods like chicken wings, add a few sheets of parchment paper to absorb the fat.
- Check food often and shake it or turn it over for crisper results.
- Prepared frozen foods may cook faster with the Air Fry mode than stated on the package. Reduce the cooking time by about 20 percent, check food early, and adjust cooking time as needed.
- Use a food thermometer to make sure food has reached a safe temperature for consumption. Eating undercooked meats can increase your risk of food-borne illness.
- For the crispiest results, dredge fresh chicken wings or tenders in seasoned flour. Use 1/3 cup flour for 2 pounds of chicken.

Recommendations When Air Frying High-Fat Foods

Foods high in fat will smoke when using the Air Fry mode. For best results, follow these recommendations when air frying foods that are high in fat, such as chicken wings, bacon, sausage, hot dogs, turkey legs, lamb chops, ribs, pork loin, duck breasts, or some plant-based proteins.

⚠ CAUTION

- Never cover slots, holes, or passages in the oven bottom or cover entire racks with materials such as aluminum foil. Doing so blocks airflow through the oven and can result in carbon monoxide poisoning. Aluminum foil can also trap heat, causing a fire hazard or poor oven performance.

- Turn on your exhaust hood at a high fan setting before you start Air Fry and leave it on for 15 minutes after you're done.

- Open a window or sliding glass door, if possible, to make sure the kitchen is well-ventilated.

- Keep the oven free from grease buildup. Wipe down the interior of the oven before and after air frying (once the oven has cooled).

- Run oven cleaning cycles (**Easy Clean**) regularly, depending on how often and what types of food you Air Fry.

- Avoid opening the oven door more than necessary to help maintain the oven temperature, prevent heat loss, and save energy.

- Air-frying fresh chicken pieces such as wings or drumsticks with the skin left on can produce smoke as the fat renders at high temperatures. If the smoke is excessive, use the Convection Roast mode instead of Air Fry.

Recommended Air Frying Guide

- Arrange food evenly in a single layer. Space food out and do not fill the entire tray. For best results in 24" ovens, arrange food in the middle of the tray and leave the sides of the tray open for better air circulation.

- Put a foil-lined baking pan on a rack in position ① to catch drips. If needed, add parchment paper to absorb oil and reduce smoking.

- Flip food over during cooking to avoid burning it.

- Suggested cook settings are only a guide. Results may vary depending on the brand or quantity of food. Adjust the settings as needed to achieve the desired results.

† High-fat items may produce more smoke when cooked using Air Fry. For less smoke, cook using Convection Roast mode.

Probe Mode

The probe accurately measures the internal temperature of meat, poultry and casseroles. Always unplug and remove the probe from the oven before removing food. Before using, insert the probe into the center of the thickest part of meat or into the inner thigh or breast of poultry, away from fat or bone. Place food in the oven and connect the meat probe to the jack. Keep the probe as far away from heat sources as possible.

• The probe can be used in the **Convection Bake**, **Convection Roast** and **Bake** modes.

• For thin cuts of meat, insert the probe in thickest side of the meat.
Using the Meat Probe Feature

⚠ CAUTION

• Always use an oven mitt to remove the temperature probe. Do NOT touch the grilling element. Failure to follow this warning can result in severe personal injury.

• To avoid damage to the meat probe, do not use tongs to pull on the probe when removing it.

• Do not store the meat probe in the oven.

1 Insert the probe into the food.

2 Open the flap upwards and connect the probe to the jack in the oven. **Probe connected** appears in the display and the probe icon appears at the top of the display.

Steam Function

Steam cooking uses the moist heat of steam to cook food. This is an ideal cooking method for delicate food items such as seafood, which can lose nutrients when boiled.

The oven provides 3 methods of steam cooking: **Steam**, **Steam Bake** and **Sous Vide**.

⚠ CAUTION

- Take care when opening the oven door during or after steam cooking. Hot steam can cause scalding.
- After any steam cooking cycle, the drying function will run automatically. It is normal to hear the steam pump running during the drying function.

Using the Water Tank

The water tank is located behind the control panel.

1 Press the **Open Panel** button on the control panel.

- The control panel automatically fully opens.
2 Remove the water tank and place it on a flat surface.

3 Remove the water tank cover or flip open the fill lid at the front of the water tank cover.

4 Fill the water tank to the **Max** line.
5 Assemble the water tank cover and the fill lid.
❶ Water tank cover

❷ Fill lid

⚠ CAUTION

- Make sure the water tank cover and fill lid are closed before putting the tank in the oven.
- Use potable water only.
- Do not fill the water tank with any fluid or mixture other than water.
- Do not fill the water tank with hot water.
- Fill the water tank up to the line indicated on the front.
- Do not tilt the water tank while it is full.
- Discard any remaining water and clean the water tank after cooking.
- Use the water tank only for its intended purpose of providing water for steam cooking.
- Monitor the water level in the tank and refill as needed for steam cooking. Use oven mitts to avoid burns when handling the hot tank.

6 Carefully insert the water tank into the correct position in the control panel, making sure to keep the tank level while carrying it. If the tank is not kept level, water will drain out of the tubes in the back.

7 Close the control panel.

Steam and Steam Bake Mode

The Steam mode cooks food using only the moist heat produced by steam. The oven can be programmed to cook at any temperature from 180 ℉ (80 ℃) to 210 ℉ (99 ℃). Make sure to empty the water tank after use.

The Steam Bake modes heat food gradually, using the oven heating elements and moist steam heat. The oven can be programmed to cook at any temperature from 210 ℉ (98 ℃) to 450 ℉ (232 ℃). Preset temperature options start at 350 ℉ (175 ℃).

Setting Steam Cook Mode

1 Press **Steam Cook** in the **Main Menu** screen.

2 Press **Steam** or **Steam-Bake**.

3 Press **Steam Level** and select the desired **Steam Level**: **High**, **Medium** or **Low**. (Steam Bake Only)
  - The **Steam Level** defaults to **High** unless you change it.

4 Press **Temp.** to set the desired cooking temperature. Press ∧ or ∨ to adjust the temperature and then press ← to save the settings.
You can also use the number pad icon to set the cooking temperature directly and then press **OK**.

5 If desired, press **Time** and press **Cook Time** or **Cooking starts at**.
Press ∧ or ∨ to adjust the time and then press ← to save the settings.
You can also use the number pad icon to set the cooking temperature directly and then press **OK**.

6 Press the **START/STOP** button on the control panel.

7 Once cooking is finished, allow the oven to cool completely and then wipe up any water on the oven interior.

NOTE
- Once Steam Bake cooking is started, an indicator on the display shows the status of the steam function.
- Make sure the water tank is filled with water before starting the Steam Bake mode. If the water in the tank runs out during cooking, a chime sounds and a popup appears in the

display. The oven continues to cook without steam.

- Remember to drain the water tank after use.
- When the temperature rises in the oven, steam may not be visible.
- It is normal to hear the sound of boiling water from the steam generator while running the steam functions.

To Stop Steam Cooking

Press the **START/STOP** button on the control panel, then press **Stop** in the display.

Tips for Steam Cooking

- To get the full benefit of steam cooking, don't overcrowd the oven rack or the steam pan.
- Preheating is not necessary when using steam modes.
- Food should retain its juiciness while achieving the correct coloring at the end of the cook time.
- Steam cooking may result in shorter cook times.
- Steamed foods can retain a higher level of moisture and nutrients and be full of flavor.
- Carefully monitor the cooking process because coloring can develop quickly with steam cooking.

Sous-Vide

Sous-Vide cooking uses steam to cook foods "low and slow." Use it to cook meat, fish, seafood, poultry or vegetables. Food must be vacuum packed in pouches.

It is not necessary to preheat the oven when using Sous-Vide.

Refer to the cooking guide for recommended Sous-Vide settings.

Benefits of Sous-Vide

The lower temperatures and long cooking times used in Sous-Vide cooking provide many benefits.

- **Healthier**

  Compared to other cooking methods, Sous-Vide retains most of the original nutrients in food.

- **Safe and Convenient**

  The long cooking times used in Sous-Vide cooking allow food to be pasteurized. Because food is vacuum packed before cooking, the unopened pouches can be quickly chilled then easily stored after cooking.

- **Crisp and Moist Results**

  The fine temperature control of Sous-Vide cooking is an excellent way to achieve the perfect texture when cooking meat and poultry. The low temperatures used retain more of the moisture in food than conventional cooking methods. After cooking, a final sear in a frying pan adds the perfect crisp finish.

Setting Sous-Vide Mode

1 Fill the tank to the **Max** line. Use softened, filtered water, if possible. Hard water may clog the steam generator more quickly with scale buildup.

2 Place the oven rack on rack position ③ and place the sealed food bag on it.

3 Press **Steam Cook** in the **Main Menu** screen.

4 Press **Sous-Vide**.

5 Press **Temp.** to set the desired cooking temperature. Press ∧ or ∨ to raise or lower the numbers, then press ← to save the settings.
You can also use the number pad icon to set the cooking temperature directly, then press **OK**.

6 If desired, press **Time**.
And press **Cook Time** or **Cooking starts at** to set the cook time or cooking start time. Press ∧ or ∨ to raise or lower the numbers, then press ← to save the settings.
You can also use the number pad icon to set the cooking time directly, then press **OK**.

7 Press the **START/STOP** button on the control panel.

8 Once cooking is finished, allow the oven to cool completely. Then wipe up any water left on the oven interior.

Changing the Sous-Vide Settings

1 Press **Edit** in the display to bring up the Cook Settings screen.

2 Adjust the settings using scroll function.

3 Press the **START/STOP** button on the control panel.

To Stop Cooking

Press the **START/STOP** button on the control panel, then press **Stop** in the display

---

NOTE

- As the temperature in the oven rises, steam may not be visible.

Tips for Sous-Vide

- Preheating is not necessary with sous-vide.

- When placing or removing food items in the oven, use a good pair of sturdy tongs.

- Adding a flavorful oil, like extra virgin olive oil, to the vacuum sealed bag can enhance your finished food item. The additional fat acts as an insulator to keep leaner cuts of protein moist or could be used as part of the sauce for the food item.

- As a general rule, fish, shellfish, and leaner cuts of meat and poultry take less time to cook. Tougher cuts will take longer. The size and number of items being cooked will also affect the time and temperature required to cook the food.

- The texture of food cooked with sous-vide may be unfamiliar. This texture isn't wrong, just different. The food will be consistently more juicy and tender than when cooked using conventional methods.

- Cooking the food in plastic vacuum-sealed bags is safe. The bags do not contain any harmful BPA that can leach into the food inside.

- Food items cooked in the anaerobic environment of vacuum sealed bags is just as safe as food cooked using conventional methods. As long as food does not stay in the USDA "danger zone" (40 °F to 140 °F) for a prolonged period of time and is cooked to a safe internal temperature for consumption, the food should be safe to eat. One of the main causes of food borne illness is when food is improperly stored for leftovers. Do not use the refrigerator to cool down hot food, as bacteria can be reintroduced in this way. Allow the food to come to room temperature, then store leftovers in smaller, shallower containers so it will cool down faster to below 40 °F when placed in the refrigerator. Food that is still vacuum sealed can be placed in ice water to cool quickly, and then stored in the refrigerator or freezer.

- Don't try to vacuum seal hot, frozen, or really wet food, as the bags will not seal properly.

- Sealing food in portion sizes and in a single layer will improve your results when using the sous-vide cooking method. The food will cook faster and be less likely to stay too long in the USDA danger zone.

- Don't crowd the oven rack. For best results, leave plenty of space between the food and the walls of the oven.

Sous-Vide Cooking Guide

The size, weight, thickness, starting temperature, and your personal preferences will affect operating times. This guide is only for reference. Adjust the cook time according to your preference.

Food	Quantity (oz)	Temp. (°F)	Rack Position	Time

Asparagus	0.5-0.7 oz	185	2	20 min.	30 min.	45 min.

- Cook 30 mins. or 1 hour more if you use meats thicker than 1".

- If you use larger cuts of meat, cut to match the recommended weight. Be careful not to put pieces of meat too close together.

MAINTENANCE

Cleaning

Interior

Do not use oven cleaners to clean the oven cavity. Use the product's **EasyClean** function regularly to clean light soil. For stubborn soil, clean manually using the following tips.

- A plastic spatula can be used as a scraper to scrape off any chunks or debris before and during oven cleaning.
- Using the rough side of a non-scratch scouring pad may help to take off burnt-on stains better than a soft sponge or towel.
- Certain non-scratch scrubbing sponges, such as those made of melamine foam, available at local stores, can also help improve cleaning.

⚠ CAUTION

- Do not use oven cleaners, harsh chemical cleaners, bleach, vinegar, steel scouring pads, or abrasive pads or cleansers to clean the oven, as they can permanently damage the oven surface.
- Do not clean the gasket.
- Do not clean the interior with the oven light on.
- To prevent burns, wait until the oven has cooled down before touching any of its parts.

For general cleaning, use a cloth with hot soapy water. For more difficult soils and built-up grease, apply a liquid detergent directly onto the soil. Leave it on for 30 to 60 minutes. Rinse with a damp cloth and dry. Do not use abrasive cleaners.

Stainless Steel Surfaces

⚠ WARNING

- To avoid scratches, do not use steel wool pads.

1 Place a small amount of stainless steel appliance cleaner or polish on a damp cloth or paper towel.

2 Clean a small area, rubbing with the grain of the stainless steel if applicable.

3 Dry and buff with a clean, dry paper towel or soft cloth.

4 Repeat as necessary.

NOTE

- To clean the stainless steel surface, use warm sudsy water or a stainless steel cleaner or polish.
- Always wipe in the direction of the metal surface finish.
- Stainless steel appliance cleaner or polish can be purchased online or from most retailers of appliances or home goods.

Oven Cavity

DO NOT use oven cleaners.

NEVER wipe a warm or hot porcelain surface with a damp sponge; it may cause chipping or crazing (tiny hairlike cracks). Food spills should be cleaned when the oven cools. At high temperature, foods react with porcelain and a permanent dull spot can result. When cleaning a spot, use only non-abrasive cleaners or scrubbers.

Oven Door

⚠ CAUTION

- Do not use harsh cleaners or harsh abrasive cleaning materials on the outside of the oven door. Doing so can cause damage.
- Do not use harsh abrasive cleaners or sharp metal scrapers to clean the oven door glass, since they can scratch the surface, which may result in shattering of the glass.
- Do not use oven cleaners, cleaning powders, or harsh abrasive cleaning materials on the outside of the oven door.

- Use soapy water to thoroughly clean the oven door. Rinse well. Do not immerse the door in water.
- You may use a glass cleaner on the outside glass of the oven door. Do not spray water or glass cleaner on the door vents.

• Do not use oven cleaners, cleaning powders, or harsh abrasive cleaning materials on the outside of the oven door.

• Do not clean the oven door gasket. The oven door gasket is made of a woven material that is essential for a good seal. Care should be taken not to rub, damage, or remove this gasket.
❶ Don't hand clean oven door gasket

❷ Do hand clean door

Oven Racks

Remove the oven racks before operating **EasyClean**.

1 Clean with a mild, abrasive cleaner.

• Food spilled into the tracks could cause the racks to become stuck.

2 Rinse with clean water and dry.

Accessories

• Clean the racks, baking tray, and other accessories with a soft cloth and hot, soapy water.

• Do not clean the accessories in the dishwasher.

EasyClean

LG's **EasyClean** enamel technology provides two cleaning options for the inside of the oven. The **EasyClean** feature takes advantage of LG's new enamel to help lift soils without harsh chemicals, and it runs using ONLY WATER for just 10 minutes in low temperatures to help loosen LIGHT soils before hand cleaning.

Your LG oven gives you the option of cleaning with LESS HEAT, LESS TIME, and virtually NO SMOKE OR FUMES. You can reduce energy use by cleaning light oven soils with the **EasyClean** feature.

Benefits of EasyClean

• Helps loosen light soils before hand-cleaning

• **EasyClean** only uses water; no chemical cleaners

- Minimizes smoke and odors

When to Use EasyClean

• Example of oven soiling
Case 1

- Soil pattern: Small drops or spots

- Types of soils: Cheese or other ingredients

- Common food items that can soil your oven: Pizza

Case 2

- Soil pattern: Light splatter

- Types of soils: Fat/grease

- Common food items that can soil your oven: Steaks, broiled / Fish, broiled / Meat roasted at low temperatures

EasyClean Instruction Guide

NOTE

• Allow the oven to cool to room temperature before using the **EasyClean** cycle. If your oven cavity is above 150 °F (65 °C), the **EasyClean** cycle will not be activated until the oven cavity cools down.

• The oven should be level to ensure that the bottom surface of the oven cavity is entirely covered by water at the beginning of the **EasyClean** cycle.

• For best results, use distilled or filtered water. Tap water may leave mineral deposits on the oven bottom.

• Soil baked on through several cooking cycles will be more difficult to remove with the **EasyClean** cycle.

• Do not open the oven door during the **EasyClean** cycle. Water will not get hot enough if the door is opened during the cycle.

1 Remove oven racks and accessories from the oven.

2 Scrape off and remove any burnt-on debris with a plastic scraper.
- Suggested plastic scrapers:
  - Hard plastic spatula
  - Plastic pan scraper
  - Plastic paint scraper
  - Old credit card

3 Fill the tank to the **Max** line. Use softened, filtered water, if possible. Hard water may clog the steam generator more quickly with scale buildup.

4 Press **Cleaning** in the **Main Menu** screen, then press **EasyClean**.

5 Press the **START/STOP** button on the control panel. The remaining time appears in the display.

6 A tone will sound at the end of the 10 minutes cycle and **Cleaning is finished** appears in the display. Press the **START/STOP** button on the display.

⚠ CAUTION

- Some surfaces may be hot after the **EasyClean** cycle. Wear rubber gloves while cleaning to prevent burns.
- During the **EasyClean** cycle, the oven becomes hot enough to cause burns. Wait until the cycle is over before wiping the inside surface of the oven. Failure to do so may result in burns.
- Avoid leaning or resting on the oven door glass while cleaning the oven cavity.

7 After the cleaning cycle and during hand-cleaning, enough water should remain on the oven bottom to completely submerge all soils.

Add water if necessary. Place a towel on the floor in front of the oven to capture any water that may spill out during hand-cleaning.

8 Clean the oven cavity immediately after the **EasyClean** cycle by scrubbing with a wet, non-scratch scouring sponge or pad. (The scouring side will not scratch the finish.) Some water may spill into the bottom vents while cleaning, but it will be captured in a pan under the oven cavity and will not hurt the burner.
NOTE

- Do not use any steel scouring pads, abrasive pads or cleaners as these materials can permanently damage the oven surface.

9 Once the oven cavity is cleaned, wipe any excess water with a clean dry towel. Replace racks and any other accessories.

10 If some light soils remain, repeat the above steps, making sure to thoroughly soak the soiled areas.

- Be sure that the oven cavity is empty of oven racks and other accessories.

NOTE

- The cavity gasket may be wet when the **EasyClean** cycle finishes. This is normal. Do not clean the gasket.
- If mineral deposits remain on the oven bottom after cleaning, use a cloth or sponge soaked in vinegar to remove them.
- It is normal for the fan to operate during the **EasyClean** cycle.
- Using commercial oven cleaners or bleach to clean the oven is not recommended. Instead, use a mild liquid cleanser with a pH value below 12.7 to avoid discoloring the enamel.

Cleaning the Water Tank

The water tank is used during the steam cooking functions. Use filtered, softened water if possible.

NOTE

- After using the steam function, the water tank should be drained. To avoid bacteria or odors, clean and dry the water tank after every use.

- Do not clean in a dishwasher.

- If the water tank does not slide in as smoothly as it should, clean the bottom of the tank.
Hard Water Scale

If hard water is used in the water tank, the steam generator may become clogged with hard water scale. In areas with hard water, run the Descaling function frequently or use softened water.

Using Descaling Function

To remove mineral deposits that remain on the oven bottom after using the steam mode, use a cloth or sponge soaked in vinegar or a weak citric acid solution. For more stubborn or extensive scaling, use the Descaling function.

NOTE

- Use the Descaling function after every 2-3 uses of steam mode.

Descaling

Use this function to remove the white deposits that form after the steam generator is used for a long period.

The Descaling function runs for 1 hour 43 minutes. Water will come out of the steam generator while it is being cleaned.

For instructions on removing and filling the water tank, see "Using the Water Tank."

Setting Descaling

1 Fill the water tank with a 50:1 mixture of water and citric acid. For example, use 4 tsp of citric acid in 4 1/4 cups water (20 g citric acid in 1000 ml water).

2 Carefully insert the water tank into the correct position in the control panel, making sure to keep the tank level while carrying it. If the tank is not kept level, water will drain out of the tubes in the back.

3 Press **Cleaning** in the **Main Menu** screen. Press **Steam Maintenance**, then press **Descaling**.

4 After 1 hour 32 minutes of descaling, a popup will appear in the display. Following the instructions, drain the tank and fill it with clean water.

5 Insert the tank and start the Rinsing function. Rinsing takes about 11 minutes.

6 Once the Rinsing function is complete, dry the inside of the oven with a soft cloth. Leave the oven door open and allow the oven to dry completely.

NOTE

- The Rinsing function must be completed even if the Descaling function is canceled.

- If water remains on the oven bottom after descaling, it can leave a residue after the oven is used.

- After running the Descaling function, clean the water tank.

Using Draining Function

The **Draining** function removes residual water inside the steam generator. The function takes a little over 1 minute and runs automatically after any steam cooking cycle. The **Draining** function can also be started manually, if needed.

Setting Draining

1 Make sure that the water tank is empty.

2 Press **Cleaning** in the **Main Menu** screen. Press **Steam Maintenance**, then press **Draining**.

3 Press the **Start/Stop** button on the display to begin **Draining**. The remaining time appears in the display.

Using Drying Function

Use the **Drying** function to dry the oven cavity after a steam cooking cycle. **Drying** runs for 20 minutes.

Setting Drying

1 Press **Cleaning** in the **Main Menu** screen. Press **Steam Maintenance**, then press **Drying**.

2 Press the **Start/Stop** button on the display to begin **Drying**. The remaining time appears in the display.

Periodic Maintenance

Changing the Oven Light

The oven light is a standard LED lamp. If the LED lamp does not turn on, please contact LG Electronics Customer Service. Do not attempt to replace or remove the LED lamp.

Removing, Assembling and Dismantling the Oven Door

Removing and dismantling the oven door may be needed to achieve better cleaning performance. The oven door contains glass that can break. Care should be taken when removing, assembling and dismantling the oven door.

⚠ CAUTION
- To prevent burns, wait until the oven has cooled down before touching any of its parts.

- The door is very heavy. Be careful when removing, lifting and replacing the door.
- Do not lift the door by its handle. The handle is not designed to support the weight of the door, doing so can result in serious damage to the door of the appliance.
- Do not hit the glass with pots, pans, or any other object.
- Scratching, hitting, jarring or stressing the glass may weaken its structure, causing an increased risk of breakage at a later time.
- Do not close the oven door until all the oven racks are fully in place.
- Wear gloves when handling glass panels to avoid injury if the glass breaks.

Removing the Oven Door

⚠ CAUTION
- Open and close the clamp completely in order to prevent damaging the oven cavity.

1 Fully open the door.

2 Lift up the door clamp ❷ and flip it towards the oven ❶ completely. Repeat on the other side.
3 Firmly grasp both sides of the door at the top.

4 Partially close the door to approximately 70 degrees ❹. If the position is correct, the hinges ❸ will move freely.

4 Lift up the door clamp ❹ and flip it towards the oven door ❶ until it clicks into position. Repeat on the other side.
5 Lift and pull the door towards you until the hinge latches are completely loosened.

Assembling the Oven Door

1 Firmly grasp both sides of the door ❶ near the top.
2 Fully insert the hinges ❷ into the slots ❸.
3 Slowly open the door fully. Make sure that the hinges ❷ are properly engaged in the slots ❸.
5 Close the door.

Dismantling the Oven Door

The oven door contains three layers of glass panels. Remove the oven door from the oven before dismantling the oven door.

1 Remove the oven door from the oven and place it on a soft, flat surface to prevent breakage and scratching with the door handle facing the floor.

2 Remove the 2 screws ❶ on both sides of the door top cover ❷ and pull forwards to remove it.
3 Wearing safety gloves, grab and lift the glass panel ❸ slightly with both hands and pull it forward to remove it from the oven door. Set the glass aside on a protected surface.
Set aside the gaskets (4 ea) inserted into the glass.
Repeat to remove all three layers of glass panels, keeping track of the order removed.
Assembling the Glass Panel

Assemble the glass panels in the reverse sequence of their removal.

1 Slide the bottom glass panel ❷ and the second glass panel ❶ into the oven door.

- Place the side of the panel printed with "**LG**" toward the oven door handle.
2 Assemble the 4 packings on the second glass panel as shown.

- The packings hold the glass in place, reducing noise and vibration in the door.
3 Slide in the top glass panel ❸ on top of the second glass panel in the oven door.

- If the glass is correctly assembled, you will see "**TOP**" printed on the bottom of the glass panel to indicate the correct orientation of the panels.
4 Assemble the door top cover ❹ and the 2 screws ❺.

- Make sure the cover clicks into place.

TROUBLESHOOTING

FAQs

Frequently Asked Questions

Q: **My new oven doesn't cook like my old one. Is there something wrong with the temperature settings?**

A: No. Your oven has been factory tested and calibrated. For the first few uses, follow your recipe times and temperatures carefully. If you still think your new oven is too hot or too cold, you can adjust the oven temperature yourself to meet your specific cooking needs. Refer to the **Changing Settings** section in this manual for easy instructions on how to adjust your thermostat.

Q: **Is it normal to hear a clicking noise coming from the back of my oven when I am using it?**

A: Your new appliance is designed to maintain a tighter control over your oven's temperature. You may hear your oven's heating elements click on and off more frequently on your new oven. This is normal.

Q: **During convection cooking the fan stops when I open the door. Is that normal?**

A: Yes, this is normal. When the door is opened, the convection fan will stop until the door is closed.

Q: **Can I use aluminum foil to catch drippings in my oven cavity?**

A: Never use aluminum foil to line the bottom or sides of the oven. The foil will melt and stick to the bottom surface of the oven and will not be removable. Use a foil-lined sheet pan placed on a lower oven rack to catch drippings instead. (If foil has already melted onto the bottom of the oven, it will not interfere with the oven's performance.)

Q: **Can I use aluminum foil on the racks?**

A: Do not cover racks with aluminum foil. Covering entire racks with foil restricts air flow, leading to poor cooking results. Use a sheet pan lined with foil under fruit pies or other acidic or sugary foods to prevent spillovers from damaging the oven finish.

> ⚠ **CAUTION**
> • Foil may be used to wrap food in the oven, but do not allow the foil to come into contact with the exposed heating/broiling elements in the oven. The foil could melt or ignite, causing smoke, fire, or injury.

Q: **What should I do if my racks are sticky and have become hard to slide in and out?**

A: Over time, the racks may become hard to slide in and out. Apply a small amount of olive oil to the sides of the racks. This will work as a lubricant for easier gliding.

Q: **Should I broil with the door open or closed?**

A: Your oven isn't designed for open door broiling. If you broil with the oven door open, it can damage the display.

Q: **Why aren't the function buttons working?**

A: Make sure that the appliance is not in **Control Lock** mode. The lock icon 🔒 will show in the display if **Control Lock** is activated. To deactivate **Control Lock**, refer to the **Control Lock** section.

Q: **My appliance is still dirty after running the EasyClean cycle. What else should I do?**

A: The **EasyClean** cycle only helps to loosen light soils in your appliance to assist in hand-cleaning of your oven. It does not automatically remove all soils after the cycle. Some scrubbing of your appliance is required after running the **EasyClean** cycle.

Q: **I tried scrubbing my oven after running EasyClean, but some soils still remain. What can I do?**

A: The **EasyClean** feature works best when the soils are fully soaked and submerged in water before running the cycle and during hand-cleaning. If soils are not sufficiently soaked in water, it can negatively affect the cleaning performance. Repeat the **EasyClean** process using sufficient water. Sugar-based and certain greasy soils are especially hard to clean.

Q: **Will EasyClean get all of the soils and stains out completely?**

A: It depends on the soil type. Sugar-based and certain grease stains are especially hard to clean. Also, if stains are not sufficiently soaked in water, this can negatively affect cleaning performance.

Q: **Are there any tricks to getting some of the stubborn soils out?**

A: Scraping the soils with a plastic scraper before and during hand-cleaning is recommended. Fully saturating soils with water is also recommended.
However, certain types of soils are harder to clean than others.

Q: **Is it safe for my convection fan or heater element to get wet during EasyClean?**

A: Yes. The convection fan or heater element may get a little wet during cleaning.

Q: **I see smoke coming out of my appliance's vents during EasyClean. Is this normal?**

A: This is normal. This is not smoke. It is actually water vapor (steam) from the water in the oven cavity. As the oven heats briefly during **EasyClean**, the water in the cavity evaporates and escapes through the oven vents.

Q: **How often should I use EasyClean?**

A: **EasyClean** can be performed as often as you wish. **EasyClean** works best when your oven is LIGHTLY soiled from such things as LIGHT grease splatter and small drops of cheese. Please refer to the **EasyClean** section in your owner's manual for more information.

	A very wet cloth was used when cleaning the window. • Do not use too much water when cleaning the window.
Warm air venting into kitchen after oven has been turned off.	**Warm air exhaust is needed to maintain and cool down oven temperatures. It turns off automatically when the heat cools to a safe temperature.** • This is normal.
Oven will not steam cook	**Improper assembly** • Make sure to slide the tank into the slot until it clicks into place.
	The drain in the water tank may be clogged with hard water scale. • If this happens, the descaling function must be run before the steam function can be used.
Water pools in the bottom of the oven during or after steam cooking	**During steam cooking, the water in the water tank is transferred to the bottom of the oven.** • It is normal for water to fill the bottom of the oven during or after the Steam mode. • If the water leaves mineral deposits on the oven bottom, remove the deposits with a cloth or sponge soaked in vinegar.
White residue appears on the oven bottom after steam cooking	**Using hard water in the water tank can result in hard water scale on the oven bottom.** • To remove mineral deposits that remain on the oven bottom, use a cloth or sponge soaked in vinegar or a weak citric acid solution.
The sous vide module beeps during operation	**This alert sounds when the sous vide module is operated without water in the steam feeder tank.** • Fill the steam feeder tank to the recommended level before using.

Parts & Features

Problem	Possible Cause & Solution
Oven control beeps and displays any error code.	**Electronic control has detected a fault condition.** • Turn off the oven function you are using to clear the display and stop beeping. Reprogram oven. If fault recurs, record fault number and call for service. [Case 1] - Error code : Heating Error - Cause: Oven not heating [Case 2] - Error Code : Steam Sensor Error - Cause: Steam sensor open, Steam sensor short
Displayed colon in the clock is flashing.	**This means that the product has just been plugged in, or that it has experienced a power interruption.** • This is normal. Reset the clock or press any button to stop the flashing.
The lock icon is on in the display when you want to cook.	**The oven is locked because of the Control Lock feature.** • Deactivate the **Control Lock** feature.
Oven light does not work.	**It is time to replace the lamp or the lamp is loose.** • Replace or tighten lamp. See **Changing the Oven Light** section in this Owner's Manual.
Convection fan stops. (During Convection Bake mode)	**Convection fan stops during a convection bake cycle. It is done to allow for more even heating during the cycle.** • This is not a failure of the appliance and should be considered normal operation.

Noises

Problem	Possible Cause & Solution
"Crackling" or "popping" sound	**This is the sound of the metal heating and cooling during both the cooking and Easy Clean functions.** • This is normal.
Fan noise	**A convection fan may automatically turn on and off.** • This is normal.

Wi-Fi

Problem	Possible Cause & Solution
Trouble connecting appliance and smartphone to Wi-Fi network	**The password for the Wi-Fi network was entered incorrectly.** • Delete your home Wi-Fi network and begin the connection process again.
	Mobile data for your smartphone is turned on. • Turn off the Mobile data on your smartphone before connecting the appliance.
	The wireless network name (SSID) is set incorrectly. • The wireless network name (SSID) should be a combination of English letters and numbers. (Do not use special characters.)

Problem	Possible Cause & Solution
Trouble connecting appliance and smartphone to Wi-Fi network	**The router frequency is not 2.4 GHz.** • Only a 2.4 GHz router frequency is supported. Set the wireless router to 2.4 GHz and connect the appliance to the wireless router. To check the router frequency, check with your Internet service provider or the router manufacturer.
	The appliance and the router are too far apart. • If the appliance is too far from the router, the signal may be weak and the connection may not be configured correctly. Move the router closer to the appliance or purchase and install a Wi-Fi repeater.

	During Wi-Fi setup, the app is requesting a password to connect to the product (on certain phones).
	
	• Locate the network name which starts with "LG" under Settings > Networks. Note the last part of the network name.
	
	  - If the network name looks like LGE_Appliance_XX-XX-XX, enter lge12345.
	
	  - If the network name looks like LGE_Appliance_XXXX, enter XXXX twice as your password. For example, if the network name appears as LGE_Appliance_8b92, then you would enter 8b928b92 as your password. In this instance, the password is case sensitive and the last 4 characters are unique to your appliance.

Upon failure to resolve the dispute during the 30 day period after sending written notice to LG, you and LG agree to resolve any claims between us only by binding arbitration on an individual basis, unless you opt out as provided below. Any dispute between you and LG shall not be combined or consolidated with a dispute involving any other person's or entity's product or claim. More specifically, without limitation of the foregoing, any dispute between you and LG shall not under any circumstances proceed as part of a class or representative action. Instead of arbitration, either party may bring an individual action in small claims court, but that small claims court action may not be brought on a class or representative basis.

Arbitration Rules and Procedures. To begin arbitration of a claim, either you or LG must make a written demand for arbitration. The arbitration will be administered by the American Arbitration Association ("AAA") and will be conducted before a single arbitrator under the AAA's Consumer Arbitration Rules that are in effect at the time the arbitration is initiated (referred to as the "AAA Rules") and under the procedures set forth in this section. The AAA Rules are available online at www.adr.org/consumer. Send a copy of your written demand for arbitration, as well as a copy of this provision, to the AAA in the manner described in the AAA Rules. You must also send a copy of your written demand to LG at LG Electronics, USA, Inc. Attn: Legal Department- Arbitration 111 Sylvan Avenue, Englewood Cliffs, NJ 07632. If there is a conflict between the AAA Rules and the rules set forth in this section, the rules set forth in this section will govern. This arbitration provision is governed by the Federal Arbitration Act. Judgment may be entered on the arbitrator's award in any court of competent jurisdiction. All issues are for the arbitrator to decide, except that issues relating to the scope and enforceability of the arbitration provision and to the arbitrability of the dispute are for the court to decide. The arbitrator is bound by the terms of this provision.

Governing Law. The law of the state of your residence shall govern this Limited Warranty and any disputes between us except to the extent that such law is preempted by or inconsistent with applicable federal law.

Fees/Costs. You do not need to pay any fee to begin an arbitration. Upon receipt of your written demand for arbitration, LG will promptly pay all arbitration filing fees to the AAA unless you seek more than $25,000 in damages, in which case the payment of these fees will be governed by the AAA Rules. Except as otherwise provided for herein, LG will pay all AAA filing, administration and arbitrator fees for any arbitration initiated in accordance with the AAA Rules and this arbitration provision. If you prevail in the arbitration, LG will pay your attorneys' fees and expenses as long as they are reasonable, by considering factors including, but not limited to, the purchase amount and claim amount. Notwithstanding the foregoing, if applicable law allows for an award of reasonable attorneys' fees and expenses, an arbitrator can award them to the same extent that a court would. If the arbitrator finds either the substance of your claim or the relief sought in the demand is frivolous or brought for an improper purpose (as measured by the standards set forth in Federal Rule of Civil Procedure 11(b)), then the payment of all arbitration fees will be governed by the AAA Rules. In such a situation, you agree to reimburse LG for all monies previously disbursed by it that are otherwise your obligation to pay under the AAA Rules. Except as otherwise provided for, LG waives any rights it may have to seek attorneys' fees and expenses from you if LG prevails in the arbitration.

Hearings and Location. If your claim is for $25,000 or less, you may choose to have the arbitration conducted solely on the basis of (1) documents submitted to the arbitrator, (2) through a telephonic hearing, or (3) by an in-person hearing as established by the AAA Rules. If your claim exceeds $25,000, the right to a hearing will be determined by the AAA Rules. Any in-person arbitration hearings will be held at a location within the federal judicial district in which you reside unless we both agree to another location or we agree to a telephonic arbitration.

Opt Out. You may opt out of this dispute resolution procedure. If you opt out, neither you nor LG can require the other to participate in an arbitration proceeding. To opt out, you must send notice to LG no later than 30 calendar days from the date of the first consumer purchaser's purchase of the product by either: (i) sending an e-mail to optout@lge.com, with the subject line: "Arbitration Opt Out" or (ii) calling 1-800-980-2973. You must include in the opt out e-mail or provide by telephone: (a) your name and address; (b) the date on which the product was purchased; (c) the product model name or model number; and (d) the serial number (the serial number can be found (i) on the product; or (ii) online by accessing https://www.lg.com/us/support and clicking on "How do I find my model number?").

You may only opt out of the dispute resolution procedure in the manner described above (that is, by e-mail or telephone); no other form of notice will be effective to opt out of this dispute resolution procedure. Opting out of this dispute resolution procedure will not affect the coverage of the Limited Warranty in any way, and you will continue to enjoy the full benefits of the Limited Warranty. If you keep this product and do not opt out, then you accept all terms and conditions of the arbitration provision described above.

PROCEDURE FOR RESOLVING DISPUTES

EXCEPT WHERE PROHIBITED AT LAW (INCLUDING WITH RESPECT TO QUÉBEC AND ONTARIO CONSUMERS), ALL DISPUTES BETWEEN YOU AND LG ARISING OUT OF OR RELATING IN ANY WAY TO THIS LIMITED WARRANTY OR THE PRODUCT SHALL BE RESOLVED EXCLUSIVELY THROUGH BINDING ARBITRATION, AND NOT IN A COURT OF GENERAL JURISDICTION. EXCEPT WHERE PROHIBITED AT LAW (INCLUDING WITH RESPECT TO QUÉBEC AND ONTARIO CONSUMERS), YOU AND LG BOTH IRREVOCABLY AGREE TO WAIVE THE RIGHT TO A JURY TRIAL AND TO BRING OR PARTICIPATE IN A CLASS ACTION.

Definitions. For the purposes of this section, references to "LG" mean LG Electronics Canada, Inc., its parents, subsidiaries and affiliates, and each of their officers, directors, employees, agents, beneficiaries, predecessors in interest, successors, assigns and suppliers; references to "dispute" or "claim" shall include any dispute, claim or controversy of any kind whatsoever (whether based in contract, tort, statute, regulation, ordinance, fraud, misrepresentation or any other legal or equitable theory) arising out of or relating in any way to the sale, condition or performance of the product or this Limited Warranty.

Notice of Dispute. In the event you intend to commence an arbitration proceeding, you must first notify LG in writing at least 30 days in advance of initiating the arbitration by sending a letter to LGECI Legal Team at 20 Norelco Drive, North York, Ontario, Canada M9L 2X6 (the "Notice of Dispute"). You and LG agree to engage in good faith discussions in an attempt to amicably resolve your claim. The notice must provide your name, address, and telephone number; identify the product that is the subject of the claim; and describe the nature of the claim and the relief being sought. If you and LG are unable to resolve the dispute within 30 days of LG's receipt of the Notice of Dispute, the dispute shall be resolved by binding arbitration in accordance with the procedure set out herein. You and LG both agree that, during the arbitration proceeding, the terms (including any amount) of any settlement offer made by either you or LG will not be disclosed to the arbitrator until the arbitrator determines the dispute.

Agreement to Binding Arbitration and Class Action Waiver. Upon failure to resolve the dispute during the 30 day period after LG's receipt of the Notice of Dispute, you and LG agree to resolve any claims between you and LG only by binding arbitration on an individual basis, unless you opt out as provided below, or you reside in a jurisdiction that prevents full application of this clause in the circumstances of the claims at issue (in which case if you are a consumer, this clause will only apply if you expressly agree to the arbitration). To the extent permitted by applicable law, any dispute between you and LG shall not be combined or consolidated with a dispute involving any other person's or entity's product or claim. More specifically, without limitation of the foregoing, except to the extent such a prohibition is not permitted at law, any dispute between you and LG shall not under any circumstances proceed as part of a class or representative action. Instead of arbitration, either party may bring an individual action in small claims court, but that small claims court action may not be brought on a class or representative basis except to the extent this prohibition is not permitted at law in your province or territory of jurisdiction as it relates to the claims at issue between you and LG. This does not apply to consumers in Ontario and Québec. In accordance with provincial legislation, the consumer and LG may agree to resolve the dispute using any procedure available, including commencing the action before the competent courts of those provinces.

Arbitration Rules and Procedures. To begin arbitration of a claim, either you or LG must make a written demand for arbitration. The arbitration will be private and confidential, and conducted on a simplified and expedited basis before a single arbitrator chosen by the parties under the provincial or territorial commercial arbitration law and rules of the province or territory of your residence. You must also send a copy of your written demand to LG at LG Electronics, Canada, Inc., Attn: Legal Department- Arbitration, 20 Norelco Drive, North York, Ontario M9L 2X6. This arbitration provision is governed by your applicable provincial or territorial commercial arbitration legislation. For consumers in Ontario and Québec, the applicable arbitration legislation only applies if consumers agree to submit the dispute to arbitration. Judgment may be entered on the arbitrator's award in any court of competent jurisdiction. All issues are for the arbitrator to decide, except that, issues relating to the scope and enforceability of the arbitration

provision and to the arbitrability of the dispute are for the court to decide. The arbitrator is bound by the terms of this provision.

Governing Law. The law of the province or territory of your purchase shall govern this Limited Warranty and any disputes between you and LG except to the extent that such law is preempted by or inconsistent with applicable federal or provincial/territorial law. Should arbitration not be permitted for any claim, action, dispute or controversy between you and LG, you and LG attorn to the exclusive jurisdiction of the courts of the province or territory of your purchase for the resolution of the claim, action, dispute or controversy between you and LG.

Fees/Costs. You do not need to pay any fee to begin an arbitration. Upon receipt of your written demand for arbitration, LG will promptly pay all arbitration filing fees unless you seek more than $25,000 in damages, in which case the payment of these fees will be governed by the applicable arbitration rules. Except as otherwise provided for herein, LG will pay all filing, administration and arbitrator fees for any arbitration initiated in accordance with the applicable arbitration rules and this arbitration provision. If you prevail in the arbitration, LG will pay your attorneys' fees and expenses as long as they are reasonable, by considering factors including, but not limited to, the purchase amount and claim amount. Notwithstanding the foregoing, if applicable law allows for an award of reasonable attorneys' fees and expenses, an arbitrator can award them to the same extent that a court would. If the arbitrator finds either the substance of your claim or the relief sought in the demand is frivolous or brought for an improper purpose (as measured by the applicable laws), then the payment of all arbitration fees will be governed by the applicable arbitration rules. In such a situation, you agree to reimburse LG for all monies previously disbursed by it that are otherwise your obligation to pay under the applicable arbitration rules. Except as otherwise provided for, LG waives any rights it may have to seek attorneys' fees and expenses from you if LG prevails in the arbitration.

Hearings and Location. If your claim is for $25,000 or less, you may choose to have the arbitration conducted solely (1) on the basis of documents submitted to the arbitrator, (2) through a telephonic hearing, or (3) by an in-person hearing as established by the applicable arbitration rules. If your claim exceeds $25,000, the right to a hearing will be determined by the applicable arbitration rules. Any in-person arbitration hearings will be held at the nearest, most mutually-convenient arbitration location available within the province or territory in which you reside unless you and LG both agree to another location or agree to a telephonic arbitration.

Severability and Waiver. If any portion of this Limited Warranty (including these arbitration procedures) is unenforceable, the remaining provisions will continue in full force and effect to the maximum extent permitted by applicable law. Should LG fail to enforce strict performance of any provision of this Limited Warranty (including these arbitration procedures), it does not mean that LG intends to waive or has waived any provision or part of this Limited Warranty.

Opt Out. The arbitration provision requires you and LG to resolve disputes by binding arbitration instead of court, unless the laws of your province or territory do not permit that, or, in other jurisdictions, if you choose to opt out. The arbitration provision does not apply to consumers in Ontario and Québec.

For individuals that fall within the binding arbitration provisions, you may opt out of this dispute resolution procedure. If you opt out, neither you nor LG can require the other to participate in an arbitration proceeding. To opt out, you must send notice to LG no later than 30 calendar days from the date of the first consumer purchaser's purchase of the product by either (i) sending an e-mail to optout@lge.com, with the subject line: "Arbitration Opt Out;" or (ii) calling 1-800-980-2973. You must include in the opt out e-mail or provide by telephone: (a) your name and address; (b) the date on which the product was purchased; (c) the product model name or model number; and (d) the serial number (the serial number can be found (i) on the product; or (ii) online by accessing https://www.lg.com/ca_en/findmodel_serial/).

In the event that you "Opt Out", the law of the province or territory of your residence shall govern this Limited Warranty and any disputes between you and LG except to the extent that such law is preempted by or inconsistent with applicable federal or provincial/territorial law. Should arbitration not be permitted for any claim, action, dispute or controversy between you and LG, you and LG agree to attorn to the exclusive jurisdiction of the courts of the province or territory of your residence for the resolution of the claim, action, dispute or controversy between you and LG.

You may only opt out of the dispute resolution procedure in the manner described above (that is, by e-mail or telephone); no other form of notice will be effective to opt out of this dispute resolution procedure. Opting out of this dispute resolution procedure will not affect the coverage of the Limited Warranty in any

way, and you will continue to enjoy the full benefits of the Limited Warranty. If you keep this product and do not opt out, then you accept all terms and conditions of the arbitration provision described above.

Conflict of Terms. In the event of a conflict or inconsistency between the terms of this Limited Warranty and the End User License Agreement ("EULA") in regards to dispute resolution, the terms of this Limited Warranty shall control and govern the rights and obligations of the parties and shall take precedence over the EULA.
