THE KINCAID DIFFERENCE

SOLID WOOD CONSTRUCTION

Genuine solid wood is used on all exterior panels and shaped edges to provide quality and beauty that will last for generations. Kincaid does not use veneers, which often crack and peel over time.

Many furniture manufacturers only use solid wood on drawer fronts, while the remainder of the product is veneer over particleboard. Edges are typically "banded" with a strip of solid wood to simulate solid wood construction, but below the veneer is particleboard.

MORTISE AND TENON JOINTS

Kincaid's case construction features mortise and tenon joinery, a time-proven method of assembling two parts at a 90° angle.

DRAWER GUIDES

A wood-on-wood non-tilting, dovetailed drawer guide is used in the installation of all Kincaid drawers.

FRONT POSTS

Where the design allows, heavy front posts are used for additional case stability and strength.

FLOATING TOPS

Fully floating tops, end panels, bed panels, etc. are incorporated into every Kincaid product to allow for normal expansion and contraction of the solid wood components as the humidity changes in your home.

DOVETAILING

Kincaid's dovetail drawer construction utilizes the best dovetail for each application. English dovetails on the drawer front and back create a tight fit and add exceptional holding power.

ADJUSTABLE GLIDES

Adjustable glides are provided on all units for leveling doors and on select units for a center support.

FLOATING PANELS

Raised panel doors and bed panels utilize a floating, self-centering construction technique.

FINGER JOINTS

All Kincaid solid wood chairs are crafted using a glue and screw technique across a finger-jointed corner, adding strength to the chair while minimizing flex across the joint.

SOLID WOOD EDGES

Shaped edges are constructed of solid wood, unlike many manufacturers who use banded veneers, to provide premium quality and durability.
