

Sligh

What's Behind the Beauty?

1

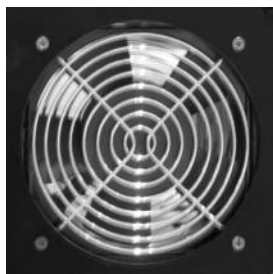

Surge Suppressor

A five-plug surge protector unit is standard in all media units.

2

SmartFan

A thermostatically controlled ventilation device, with a silent fan, dissipates heat from electronic components within enclosed compartments of Sligh media units. Available as an option.

3

SmartEye®

An unobtrusive infrared signal receiver is installed in the front of Sligh media units that controls electronic components by repeating the signal inside the enclosed compartment. The SmartEye is standard on select media units.

4

Smart Ventilation

Horizontal air vents are designed into the top and bottom of media unit back panels. Inside enclosed compartments, shelves are also slotted with air vents, facilitating a natural airflow. Heated air rises and escapes through the upper vents while drawing cool air in from the bottom. Standard on all media units.
