

Light Bulb Location in AK1100/1200 and AK6500 Packaging

To reduce the defective rate of light bulbs caused by transit, light bulbs are now packaged separately from the hood.

The following pictures shown the light bulbs are inserted into one of the protective foam piece. In rare instances, customer could have missed the bulbs and throw them away along with the protective foam. Especially in cases where customer is opening the package from the bottom.

*note - packaging may appear slightly different from pictures.

Light Bulbs inserted into packaging foam.
